

Justine A. Nicdao

FULL STACK SOFTWARE ENGINEER

Pampanga, Philippines · +63 976 008 9587 · justine.anicdao@gmail.com · nodica-portfolio.vercel.app

TECHNICAL SKILLS

Languages	JavaScript · Python · Java · HTML · CSS
Frameworks & Libraries	NextJS · ReactJS · NodeJS · ExpressJS · TailwindCSS · MaterialUI
Databases	MongoDB · Supabase · NeonDB
Tools & Platforms	OpenAI · AWS · Webflow · Elementor

PROFESSIONAL EXPERIENCE

Full-Stack Developer

May 2026 – June 2026 · 30-day build

TrulyHome — Freelance / Client Build

- Single-handedly designed, built, and shipped TrulyHome—a multi-role logistics and project-management platform—to production in a 30-day build, onboarding 13 staff accounts on launch day.
- Architected a 5-role access model plus a public shipment-tracking surface on Next.js 16 (Server Components/Actions), React 19, and Supabase (Postgres 17, Realtime, RLS); hardened through two security red-team passes.
- Shipped a 7-stage pipeline with damage-triggered reprocessing, live freight tracking (ODFL, FedEx), EBOL PDF generation, native mobile (Capacitor 8, iOS/Android), and Playwright E2E across 3 device profiles.

Lead Developer

April 2026 – June 2026

Zaptime

- Led development of Zaptime, a cross-device Electron time-tracking app with an AI assistant—authoring ~74% of the codebase (138 of 187 commits) and shipping 23 production Windows releases in ~2 months across a 6-person team.
- Executed a zero-downtime Firebase → Supabase migration via a dual-backend abstraction with an identical IPC contract, enabling safe rollback while active users kept syncing.
- Built a multi-provider AI assistant (OpenAI, OpenRouter, MiniMax) behind a table-driven abstraction with a deterministic activity-categorization engine, plus cross-device sync and a Node 18/20 GitHub Actions CI/CD pipeline (NSIS + Microsoft Store).

Full Stack Software Engineer

June 2025 – January 2026

Switch

- Built responsive, accessible UIs with Next.js 15 (App Router), React/TypeScript, TailwindCSS, and Shadcn/UI—turning designs into reusable, consistent components.
- Designed a secure, multi-tenant backend on Supabase with RLS, RESTful APIs, validation, and RBAC; integrated Plaid for bank data and a resilient EmailService with provider fallbacks; managed secrets via Infisical.
- Delivered AI-powered transaction categorization with human review and auditability; improved performance using Suspense, code splitting, and dynamic imports.
- Drove quality and reliability by refactoring large files into clean modules, adding comprehensive tests and monitoring, fixing bugs, and improving developer experience.

Full Stack Software Engineer

April 2025 – January 2026

Badge AI

- Architected and shipped the Badge Profile UI with TypeScript React (Vite), Wouter, Tailwind, and Shadcn/Radix—implementing profile sections, modals, QR previews, and fully responsive layouts.
- Built robust data/state layers using React Query and Zustand, added ProtectedRoute access control, and integrated OAuth/magic-link authentication with organization/role flows.
- Delivered AI and media features: headshot generation and chat, secure image uploads with DB-backed storage, and banner/branding tools—optimized via lazy-loading, code-splitting, and image best practices.
- Implemented backend routes and infra (profiles, chat, leads, settings), Stripe sandbox, and Drizzle migrations; improved quality with Jest/RTL tests, bug fixes, and performance tuning.

Lead Full Stack Software Engineer

July 2023 – July 2025

NarrativeTech

- Led the development and technical delivery of NarrativeTech platforms, taking ownership of architecture, implementation, and day-to-day execution across multiple client projects.
- Built and maintained full-stack applications using Next.js, Node.js, PostgreSQL, and Tailwind CSS, turning wireframes and product requirements into scalable, production-ready features.
- Implemented OpenAI agents and API integrations for document analysis and intelligent user assistance, improving workflow efficiency and overall user experience.
- Delivered a government portal from scratch and managed multiple subprojects in parallel, addressing client feedback, security requirements, and ongoing platform improvements while collaborating closely with UI/UX designers.

Frontend Software Engineer

July 2024 – February 2025

Ariolas Tech

- Developed responsive front-end applications with Next.js, React, and Tailwind CSS, transforming wireframes and design specifications into intuitive, user-friendly interfaces.
- Implemented AI technologies across multiple projects, delivering innovative solutions that enhanced product capabilities and improved user experience.
- Built robust backend systems using Supabase, and Infisical for secure environment management, creating scalable and maintainable application architecture.

Full Stack Software Engineer

May 2023 – September 2023

Unexus Solutions

- Developed and maintained medical-related web portals using React for responsive interfaces, MongoDB for data storage, and Strapi as a headless CMS. Implemented Docker containerization for consistent deployment, and ElasticUI for intuitive interfaces.
- Managed front-end development and resolved back-end configuration issues. Collaborated with team members to accelerate tasks and incorporate diverse perspectives on encountered issues.

EDUCATION

Bachelor of Science in Information Technology, Major in Web Development

2019 – 2023

Holy Angel University

Technical Vocational Livelihood, Specialization in Technical Drafting

2017 – 2019

Angeles City National Trade School

CERTIFICATIONS

Civil Service Professional Examination Passer	2022
Multimedia Arts 2020 (Graphic and Web Design Workshop)	2020
NCII Technical Drafting	2020
